Education

Woxsen University

Hyderabad, India

B.Tech in Computer Science and Engineering (GPA: 8.61/10)

2024–2028

Relevant Coursework: Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP), Database and Management Systems (DBMS), Computer Network, AI/ML Foundations

Technical Skills

Skills: Python, SQL, PyTorch, Scikit-learn, LLMs, RAG, Prompt Engineering, LangChain, LangGraph, Hugging Face, Transformers, FastAPI, MongoDB, Vector databases, Git, Docker, Jupyter Notebook, Google Colab

Professional Experience

Wipro

Hyderabad, India

Intern

May 2025 – July 2025

- Designed and engineered an end-to-end enterprise Retrieval-Augmented Generation (RAG) system using LangChain and Python, enabling accurate query answering across 25+ high-volume PDF documents.
- Integrated Hugging Face sentence embedding models to align semantic search queries and utilized ChromaDB to dynamically index and store over 1,000 high-dimensional document chunks.
- Optimized QA system accuracy and decreased model hallucinations by running iterative validation tests across diverse chunking strategies, retrieval parameters (Top-K), and customized system prompt layouts.

Projects

PaperForge AI

Python, RAG, LLMs, Vector Databases, FAISS

2026

- Developed an end-to-end Retrieval-Augmented Generation (RAG) pipeline leveraging semantic retrieval and vector search to autonomously extract methodologies from academic research papers.
- Implemented advanced semantic chunking and recursive character splitting strategies to maintain context boundaries, improving retrieval accuracy (Recall@K) during dense document parsing.
- Engineered a research-to-code parser module using LLMs, designing strict system prompts and output schemas to successfully convert unstructured academic formulas into compilable Python functions.

URL Shortener

Python, Django, Docker, Bootstrap

2026

- Engineered a full-stack Django web application to generate, store, and seamlessly redirect custom URL hashes, featuring a responsive frontend built with Bootstrap.
- Containerized the application environment using Docker and docker-compose, streamlining local development and ensuring cross-environment consistency.
- Established automated continuous integration (CI) workflows via GitHub Actions and configured production deployment profiles for scalable hosting.

Certifications & Competitions

2026: Generative AI & Agentic Developer Suite – Anthropic (*Agent Skills, Model Context Protocol, Claude API/Code*)

2026: Git Fundamentals & Version Control – LearnkartS

2024, 2025: Udgham 24-Hour Hackathon – Woxsen University

2025: Data Structures Using Python – Packt

2024: Programming for Everybody (Python) – University of Michigan
